WHEEL LOADERS

Giant wheel loaders are currently designed and produced in our own management in Oisterwijk (the Netherlands). In 2009 TOBROCO Machines has started with the development of new models for the existing range. These new models will replace the existing ones. For development TOBROCO Machines is using a sophisticated 3-dimensional design program. Thus before taking a machine in production, its performance can be tested already. During the development of the new models TOBROCO takes care of the demands and needs of their customers. TOBROCO is a specialist in compact wheel loaders.

In the modern plant in Holland they build the GIANT wheel loaders. We work with the best suppliers: Kubota, Rexroth. GIANT is robust, durable and quality made in Holland. They work with the best suppliers: Kubota, Rexroth. GIANT is robust, durable and quality made in Holland. The producing company is TOBROCO, based in Oisterwijk (the Netherlands).

To fulfill the needs and demands of her customers TOBROCO offers a wide range of wheel loaders. This range consists out of different types of loaders with a service weight between 1000 kg and 4150 kg. In this leaflet you find the machines in the heavy comfort.

**TECHNICAL DATA**

**V4502T & V5003T X-TRA**

The GIANT X-TRA range is based on the normal range. The lower front frame gives these GIANT’s a higher tipping load. And because of their lower centre of gravity our loaders are secure and have a good stability even under difficult conditions.

**V4502T / V5003T**

The GIANT V4502T and the GIANT V5003T replace the successful range V4501T - V5002T GIANT Wheel loaders. The new models have a new design, cylinder filter, main switch electric, ROPS/FOPS safetyroof, luxury seat, standard 1 counterweight integrated in the backside. Heavy planetary and drive axles with electric 100% differential lock on both 12 tons axles.

The machine has an hydraulic quick change, with 3e hydraulic functions. Also an optional 2-kinematic on the lifting arm. The kinematic system has been designed in such a way to facilitate the quick loading and unloading of your cargoes. There is a better visibility on the working tools with 2 kinematics.

**V6004T & V6004T X-TRA**

The GIANT V6004T and the GIANT V6004T X-TRA have a higher tipping load. 14 tons heavy planetary and drive axles with electric 100% differential-lock, top speed 28 km/h. and is the strongest machine of the range. The V6004T has a 2-kinematic lifting arm, lifting height 329 cm. The kinematic system has been designed in such a way to facilitate the quick loading and unloading of your cargoes. There is a better visibility on the working tools with 2 kinematics. And because of their lower centre of gravity our loaders are secure and have a good stability even under difficult conditions.

**For working with potentially falling objects, use of a ROPS/FOPS safety roof is mandatory.**
